

Name of Student: Karan Kumar Pal	PRN:25070122098
Semester: III	Year : AY 2026-27
Subject: Programming with Java	
ASSIGNMENT No : 11	
TITLE : Super Keyword in Java	

Problem Statement

Write a Java program to demonstrate the implementation of interfaces.

Learning Objectives

To implement interfaces for achieving abstraction and multiple inheritance of type

Programme

1)

```
package Experiment11;
class Student {
    int rollNo;
    String name;

    Student(int rollNo, String name) {
        this.rollNo = rollNo;
        this.name = name;
    }

    void printDetails() {
        System.out.println("Student Details");
        System.out.println("Roll No : " + rollNo);
        System.out.println("Name      : " + name);
    }
}

class Employee {
    int empId;
    String name;

    Employee(int empId, String name) {
        this.empId = empId;
        this.name = name;
    }
}
```

```

        void printDetails() {
            System.out.println("Employee Details");
            System.out.println("Employee ID : " + empId);
            System.out.println("Name          : " + name);
        }
    }

    public class Exp11a {
        public static void main(String[] args) {
            Student s = new Student(101, "Pratik");
            Employee e = new Employee(201, "Rahul");

            s.printDetails();
            System.out.println();
            e.printDetails();
        }
    }
}

```

Output

```

PS C:\Users\Admin\Desktop\Java> & 'C:\Program Files\Eclipse Adoptium\jdk-17.0.19-hotspot\bin\java.exe' '-agentlib:jd
dt_socket,server=n,suspend=y,address=localhost:55310' '-XX:+ShowCodeDetailsInExceptionMessages' '-cp' 'C:\Users\Admin\Ap
\Code\User\workspaceStorage\66c35960ff10266939b1b6571e72db4a\redhat.java\jdt_ws\Java_9b8abd94\bin' 'Experiment11.Exp11a'
Student Details
Roll No : 101
Name    : Pratik

Employee Details
Employee ID : 201
Name       : Rahul
PS C:\Users\Admin\Desktop\Java>

```

2)

```

package Experiment11;
class Light {

    void turnOn() {
        System.out.println("Light is ON.");
    }
}

class Fan {

    void turnOn() {
        System.out.println("Fan is ON.");
    }
}

public class Exp11b {
    public static void main(String[] args) {

        Light light = new Light();
    }
}

```

```
Fan fan = new Fan();

    light.turnOn();
    fan.turnOn();
}
}
```

OUTPUT:

```
PS C:\Users\Admin\Desktop\Java> & 'C:\Program Files\Eclipse Adoptium\jdk-17.0.19.1
dt_socket,server=n,suspend=y,address=localhost:55314' '-XX:+ShowCodeDetailsInExcept
\Code\User\workspaceStorage\66c35960ff10266939b1b6571e72db4a\redhat.java\jdt_ws\Jav
Light is ON.
Fan is ON.
PS C:\Users\Admin\Desktop\Java>
```

Conclusion

Both programs demonstrate the use of **classes, objects, and methods** in Java. They show how different classes can define and use their own methods to perform specific tasks, improving code organization, reusability, and the basic understanding of object-oriented programming concepts.
